Consultation on Stage 2 Petrol Vapour Recovery at service stations:
Answers of the Region of Brussels Capital

The draft of the european legislation « stage 2 PVR » is already integrated in the Brussel's legislation since 21/01/99.

At this date, the Region of Brussels Capital has adopted a decree fixing the environmental requirements for service stations.

In this decree, we can find the stage 2 PVR, more specifically in the articles 17 and 71 §4 of the decree. You can find a copy of the decree attached to this answer.

5.1. and 5.2.

We are not able to answer to this type of questions. It's not a part of our competence.

5.3. In the Region of Brussels Capital, stage 2 PVR has been applied to all the existing or new service stations from which the debit is higher than 500.000 l/year.

A schedule for the conformity has been established on +/- 7 years in function of various parameters among which the debit of the service station.

5.4. Yes, the threshold applied in the Region of Brussels Capital is 500.000l/year.

5.5. Yes, see the answer of question 5.3 and also the article 71 of the decree annexed.

5.6. No, we choose another solution : the system has to be maintained and controlled once a year.

5.7. Yes, in the Region of Brussels Capital, every service station which are built underneath the vertical projection of a building (residential or not) has to respect the stage 2 PVR, and this even if the debit is lower than 500.000 l/year.
