

## ACCESS TO THE INFORMATION

Her Italian Chambers of Commerce believe that the register of the enterprises both a formidable tool for the transparency and the competitiveness of the enterprises of the European union. This tool is limited by a national optics that is not adjusted to the expectations of the citizens and the European enterprises anymore today. For this the registers of the enterprises must evolve. The Italian Chambers, through Infocamere, they are among the partners founders of EBR. EBR has realized a network telematico among the registers of the enterprises that it connects 18 countries dell UE and 6 countries extra UE. Thanks to EBR today it is possible to consult on-line the official data of over 20 million enterprises. In Italy, the access is directed by the home page of [www.registroimprese.it](http://www.registroimprese.it). It deals with an excellent case of initiative of European administrations with a joined public service, unitary, operational and of great utility.

On this base the Italian Chambers of Commerce propose that the Italian answers direct him to the development of EBR what hinge to improve the access to the data of the registers of the enterprises to European level. Following the questions set in the Green Paper, the followings are proposed you sprout.

And' necessary that the whole States Members connect his/her own register to the network of the registers realized by EBR E' necessary that the states members, coordinated by the Committee Europea, defines a "governance agreement" with the formalities of share e/o connection to EBR. You give the criticità already found in some Countries, the accord must foresee forms of connection that don't impose the adhesion as member of the GEIE.

And' necessary that the Committee Europea, through rule, defines an ample group of information obbligatorie to enroll in the national registers so that to develop a "certified of enterprise European" for a best circulation and understanding of the informazinis on her, to support of the administrative simplification to European level.

And' necessary that EBR develops besides the necessary functionalities to the data transmission and information with legal value, also in formed electronic (how expectation from the first Directive on the Right of the societies) And' necessary that the Committee, through rule, the bonds makes among entity clear and univocal in the various registers it undertook some union: without this the transparency there won't be. Wonders therefore that every enterprise uses the identificativo attributed her by the register where the center (suitable with the term REID) is enrolled in the moment in which it enrolls his/her own branches (branches) in other community Countries or when it is recorded as holder of quotas / actions of enterprises of the union.

## COOPERATION AMONG REGISTERS

The Register Undertook Italian, through InfoCamere and the Chambers in Venice and Milan, you/he/she has participated in the project BRITE. The project has realized a prototype of system of communication among registers with the purpose to exchange information and documents among the registers in case of transfer of center inside the union and in the case of alri events that concern enterprises with locations in more states of the UE. The results of the project BRITE will be integrated soon in the network EBR. On this base the Italian answers should support the development of EBR what useful network also to the cooperation among the registers. They propose therefore the followings you sprout.

And' necessary to guarantee a support to EBR for the implementation of the results of the project BRITE, to support of the European policieses that foresees informative exchanges among the registers themselves (If, fusion transfrontaliera, transfer of centers, services what BDS and DOR, etc.) And' necessary that States Members, eventually coordinated by the Committee Europea, defines the situations, the times and the formalities of informative exchanges to support of the policieses of which above.

And' necessary that States Members, eventually coordinated by the Committee Europea, defines the situations, the times and the formalities of informative exchanges to support of the policieses of which above.

And' important that States Members, coordinated by the Committee Europea, the operations make clear and homogeneous that can be developed by the registers of the enterprises on the base of communications from other registers. An example can be the regulation of the cancellation of branch to forehead of the cancellation of the principal center in other country.

As it regards the IMI, the point of view of the Chambers of Commerce is that the system IMI is a formidable tool because the administrative cooperation among States Members can happen in effective and transparent way; an improper use of the system IMI, besides degrading the performances of the tool, it also degrades the rapidity with which information can reach the interested forehead. This means that if an information is immediately already available in a State Member (for example through the consultation of registers public), the application of the same information through the IMI represents an improper use that creates the conditions of of it I previously degrade you quote. The use dell IMI should concern only cases "special", in which the information online from the public registers doesn't allow a correct solution of the problem. You holds therefore useful, to make effective pià the use of the IMI, to act scondo the following lines:

- to) recommendation to States Members to use the system EBR to recover all the present information on these registers of the enterprises, through the multilingual interface of EBR
- b) to predispose, on the system IMI, computer (Bees) interfaces that allow States Members, that have information of interest on you file or registers, also different from the Register of the Enterprises, to automatize the immission of answers in the system same IMI.
