

Dear Mr, Mrs,

With reference to the "Public consultation about simplifying 8 legal metrology directives" as published on your internet site : [http://ec.europa.eu/enterprise/prepack/ms\\_inst/mi\\_directives.htm](http://ec.europa.eu/enterprise/prepack/ms_inst/mi_directives.htm) .

As manufacturer of electronic alcohol meters, I request you to consider to widen the scope for alcohol meters, as mentioned in Directive 76/765/EEC. The current scope is only alcohol meters, made from glass.

Technology is excellently improved over the last thirty years sothat nowadays also electronic alcohol meters are commercially available on the market. These electronic alcohol meters give the indication directly in volume% or mass%.

The electronic alcohol meters can be splitted up between:

- laboratory equipment  
a sample is taken (under static condition from a tank or flowing condition from a pipeline) and investigated in the laboratory  
with the electronic laboratory alcohol meter
- in-line equipment  
under flowing condition the electronic alcohol meter measures and indicates the volume% or mass%

Looking forward to your reaction,

Best regards,

Aart Pruysen
